

Shock Team Pilot Phase

Targeted toward advanced discussion re: cardiogenic/mixed shock patients

Starting Monday 5/4/26

Cardiology fellow to still receive initial page and evaluate consult, determine whether larger group needs to convene

If activated, page will go out to group including Zoom link

PLEASE join!

- Even if you don't feel like you can add a lot, your presence helps and can help address critical care issues (and stay updated for management strategy)
- Two-way street: our engagement with this team will help bolster involvement for future MICU activations

Activation Criteria

Must meet each of the following:

- A. Hypotension: SBP <90mmHg for >30 minutes or requiring vasoactives to maintain SBP >90mmHg or MAP >65mmHg
- B. End-organ dysfunction: at least 2 of the following:
 - Physical exam: cool/mottled, altered mental status
 - Elevated Cr (above baseline if known) and/or oliguria (UOP < 30 cc/hr or < 0.5 mL/kg/hr)
 - Elevated AST/ALT > 500
 - Lactate >3mmol/L
- C. Evidence of cardiac dysfunction: at least one of the following
 - Known cardiac presentation (e.g. PE, STEMI/NSTEMI, myocarditis, heart failure, VT/VF)
 - TTE with LV and/or RV dysfunction or severe valvular disease (e.g. AS, AR, MS, MR)
 - PAC with CI < 2.0 L/min/m² or ScvO₂ from central line < 60% (in context of Hgb and SpO₂)

BUT – these are guidelines not a strict threshold, would encourage you to call/push to activate if concerned
